Fatigue strength (reinforcing steel) BS EN 1994-2, section 6.8.3(2) refers to BS EN 1992-1-1 for the fatigue strength of reinforcing steel. BS EN 1992-1-1, section 6.8.4 gives the value of the resisting stress range  $\sigma_{Rsk}$  at  $N^* = 10^6$  cycles as 162.5Mpa for straight bars. However, for bent bars (including cranked bars) a reduction factor  $\gamma$  ( $\gamma = 0.35 + 0.26 D/7$ ) must be applied this is very severe for bars bent around a minimum mandrel diameter.

Definitions. Some authors use endurance limit,  $S_e$ , for the stress below which failure never occurs, even for an indefinitely large number of loading cycles, as in the case of steel; and fatigue limit or fatigue strength,  $S_f$ , for the stress at which failure occurs after a specified number of loading cycles, such as 500 million,...
