Fetter & Walecka, Problem 6.4 a) We use the relativistic gamma factor = 1 / sqrt(1 - v^2/c^2), which still depends on v, to write L = mc^2 / gamma. Using @L @x_i = mx_i q 1 v^2 c^2 = mx_i = p i; @L @x i = @V @x i = F i: and with the relativistic momentum p = gamma m v and conservative force F = -dL/dx the Lagrange equation then

This two-part text supplies a lucid, self-contained account of classical mechanics and provides a natural framework for introducing advanced mathematical concepts in physics. Topics include Lagrangian dynamics, Hamiltonian dynamics, fluids and sound and surface waves, more. 165 figures. 2 tables. 1980 edition.

Physics 505 Autumn 2008 - University of Washington

This mismatch is something of an issue: the coverage of material is rather vague compared to the detail of the problems which makes a course based on this text rather frustrating at times. The mechanics texts by Goldstein and Arnold (for those more into mathematics) are superior to Fetter and Walecka while covering most of the same material.
