topology are relatively simple: adic spaces are locally perfectoid. In recent progresses, adic spaces and perfectoid spaces have played a central role in the study of p-adic geometry, p-adic Hodge theory, and number theory; for example, [Sch2], [Sch3], [CHJ], [BMS], and [LZ]. Let us use modular curve as a demonstration.

The Effort to Build the Mathematical Library of the Future ...

This is release 7.5 of our project, aiming to provide a complete treatment of the foundations of almost ring theory, following and extending Faltings's method of "almost étale extensions". The central result is the "almost purity theorem", for whose proof we adapt Scholze's method, based on his perfectoid spaces. This release provides the foundations for our generalization of Scholze's ...

FOUNDATIONS OF LOGARITHMIC ADIC SPACES

The central result is the "almost purity theorem", for whose proof we adapt Scholze's method, based on his perfectoid spaces. This release provides the foundations for our generalization of Scholze's perfectoid spaces, and reduces the proof of the almost purity theorem to a general assertion concerning the étale topology of adic spaces, whose proof uses previous work by the first author.

Homepage of Gabriel Dorfsman-Hopkins

A perfectoid space is an object of CLVRS which is locally isomorphic to $\text{Spa}(A)$ with A a perfectoid ring. Note however that CLVRS is a full subcategory of the category $\text{PreValuedRingedSpace}$ of topological spaces equipped with a presheaf of topological rings

University

This year's topic (Perfectoid Spaces) is drawing a huge number of people there next month, with about 450 participants expected (in the past numbers were more like 100). This should be a veritable Woodstock of arithmetic geometry, with no one I've talked to quite able to figure this out, thinking that there probably weren't 450 people worldwide interested at all in arithmetic geometry.
