Fundamentals of Satellite Remote Sensing: An Environmental Approach, Third Edition is a definitive guide to remote sensing systems that focuses on satellite-based remote sensing tools and methods for space-based Earth observation (EO). It presents the advantages of using remote sensing data for studying and monitoring the planet, and emphasizes concepts that make the best use of satellite data.

" Remote Sensing is the art and science of acquiring information about the earth surface without having any physical contact with it. This is done by sensing and recording of reflected and emitted energy. In the process of Remote Sensing involves an interaction between the incoming radiation and interest of target.

A Remote Sensing image in contrast, is an objective recording of the Electromagnetic reaching the sensor. Another important difference, is that a map is a projection of the earth on paper, without any relief displacements, while in a Remote Sensing image both relief displacements and geometrical distortions.
