Fundoscopy | Health24

Answer: Fundoscopy, especially when the pupils are dilated for a more complete view of the entire retina, allows for examination of the retina to help diagnose conditions and identify risk factors for potential vision loss associated with the retina.For example, patients with diabetes should have an annual dilated fundus examination to check the retina for signs of diabetic retinopathy that ...

Fundoscopy Made Easy - Jeya Book Centre

The author routinely uses a commercial universal smartphone macro lens attachment (ie, Easy-Macro) that provides 4x magnification via a small plastic lens embedded in a rubber band. The rubber band wraps around the body of the smartphone, and the lens is situated in front of the camera (Figure 4). Once the lens attachment is affixed to the smartphone camera lens, the camera application should be toggled to video mode.

Ophthalmology: Fundoscopy

Ophthalmoscopy, also called funduscopy, is a test that allows a health professional to see inside the fundus of the eye and other structures using an ophthalmoscope. It is done as part of an eye examination and may be done as part of a routine physical examination. It is crucial in determining the health of the retina, optic disc, and vitreous humor. The pupil is a hole through which the eye's interior will be viewed. Opening the pupil wider is a simple and effective way to better see the struct
