If the overspeed trip protection of a steam turbine fails to function at the design set speed, turbine buckets or a section of a wheel can break free of the rotor and, in a worst case scenario, penetrate the turbine casing. This can cause major damage to the turbine-driven equipment with a possibility of injuries and/or fatal-

Gas Turbine Protection Manual - wp.nike-air-max.it
The Turbine Protection System (TPS) provides an additional independent protection function for the steam turbine and generator. The TPS detects undesirable operating conditions and initiates trips to avoid damaging the steam turbine. The Mitsubishi TPS is implemented with a digital nuclear Instrumentation and Control (I&C) platform MELTAC.

TURBINE OVERSPEED TRIP PROTECTION - Tri-Sen

A gas turbine, also called a combustion turbine, is a type of continuous and internal combustion engine. The main elements common to all gas turbine engines are: an upstream rotating gas compressor; a combustor; a downstream turbine on the same shaft as the compressor.; A fourth component is often used to increase efficiency (on turboprops and turbofans), to convert power into mechanical or ...
