Gene expression is the process by which inheritable information from a gene, such as the DNA sequence, is made into a functional gene product, such as protein or RNA.

Name: Block: Date: Unit 4: Cell Development and ...

The simple answer is that different cell types express different genes...that's why they are different cell types. More specifically, as a multicellular organism develops from a single fertilized egg, there are key cell divisions during which one daughter cell begins to express different genes than the other daughter cell.
