What is generalization in research? - Quora

Generalization refers to the extent to which findings of an empirical investigation hold for a variation of populations and settings. The definition of generalization is closely related to the concept of external validity, which concerns whether findings of one particular study can be applied to unexamined subjects and contexts.

Generalization in Quantitative and Qualitative Research ...

Five different lines of reasoning about generalization, which could possibly be useful in qualitative research, are presented. They are: 'studies that undermine established universal "truths"', 'the ideographic study', 'enhancing the generalisation potential by maximizing variation', 'generalisation through context similarity' and 'generalisation through recognition of patterns.'
