Physical Geography - John Abbott College

What is Geomorphology? Geomorphology is the study of landforms, i.e. the shape of the Earth's surface. It attempts to explain why landscapes look as they do in terms of the structures, materials, processes, and history affecting regions. Geomorphology relates to all the other disciplines of geology in two directions ; Tectonics, petrology, geochemistry, stratigraphy,

Useful Notes on Geomorphology

Geomorphology is the science of landforms, with an emphasis on their origin, evolution, form, and distribution across the physical landscape. Understanding geomorphology is therefore essential to understanding one of the most popular divisions of geography.

Useful Notes on Geomorphology. Basically, geomorphology is the study of the nature and history of landforms and the processes which create them. Geomorphology is often identified with geology, or considered a branch of geology. The systematic study of landforms, indeed, requires some fundamental knowledge of geology as the genesis and development...

Geomorphology and General Systems Theory

Definition: (Geo, G. the Earth; Morph, G. Form, ology G. the science of) Geomorphology is the study of landscapes--It entails the systematic description of landforms and the analysis of the processes that create them. Geomorphologists are also concerned with understanding the function landforms and how landforms respond to changes in energy.
