Handbook Of Plants With Pest Control Properties Zaraa

Avalon_Studio / Getty Images. Whiteflies feed off plants by sucking the plant's juices. They can cause wilting, stunting, and death. □ □ As with their relatives the aphids, mealybugs, and scale, a whitefly population can grow quickly. The best way to control whiteflies is to constantly monitor for them and use a combination of techniques to keep their population down.

Handbook of Vegetable Pests | ScienceDirect

Many plants offer a suitable breeding place for many kinds of insects. Apples, cabbage, corn, elm, grape, grass, maple, oak, peach, pear, pines, poplar, potatoes, and roses have many serious pests. However, insects seldom destroy these plants. The threat of damage by insects need not prevent an attempt to grow any of these plants.
