Duct System Design Page 1.5 energy is due to elevation above a reference datum and is often negligible in HVAC duct design systems. Consequently, the total pressure (or total energy) of air flowing in a duct system is generally equal to the sum of the static pressure and the velocity pressure. As an equation, this is written:

BSO: Powered by HAP. Carrier's Building System Optimizer (BSO) is a screening tool for the schematic design phase of projects where multiple HVAC design alternatives need to be evaluated quickly to identify the design(s) with the greatest potential for energy performance.. Users can then study those designs further using detailed design tools like Carrier's Hourly Analysis Program (HAP).

The Fundamentals of Duct System Design

Air flow problems have plagued the HVAC industry for years. No matter how much money you spend on a highquality HVAC system, the equipment won't work at its best without properly designed and installed ductwork. Ducts that are not well designed result in discomfort, high energy costs, bad air quality, and increased noise levels.
