## Convert to Scientific Notation 4.7 | Mathway

Scientific notation is a standard way of writing very large and very small numbers so that they're easier to both compare and use in computations. To write in scientific notation, follow the form where  $N$  is a number between 1 and 10, but not 10 itself, and  $a$  is an integer (positive or negative number).

## Quiz - Quizizz

Scientific notation is the way that scientists easily handle very large numbers or very small numbers. For example, instead of writing 0.0000000056, we write  $5.6 \times 10^{-9}$ . So, how does this work? We can think of  $5.6 \times 10^{-9}$  as the product of two numbers: 5.6 (the digit term) and  $10^{-9}$  (the exponential term).

## Math Skills - Scientific Notation

M8 1-2: Scientific Notation  
HW . Answer the following questions on your lined paper. 1. A computer can perform  $4.66 \times 10^8$  calculations per second.

speed of  $5.88 \times 10$  miles per year (called a light-year

**(Solved) - Algebra II Name**

...

One last example: Consider  $5 \times 10^{-8}$  multiplied by  $6 \times 10^{-7}$ .  $5 \times 6 = 30$  and  $-8-7 = -15$ . So, the answer would be  $30 \times 10^{-15}$ , except that the number is again not in proper scientific notation. So, we write it as  $3.000 \times 10^{-14}$ , by again adding 1 to the power exponent. So, try doing the following multiplication:
