Modeling and Removal of Inclusions in Continuous Casting inclusions by bubbles during the continuous casting of steel. First, the attachment probability of inclusions on a bubble surface is investigated based on fundamental fluid flow simulations, incorporating the turbulent inclusion trajectory and sliding time of each individual inclusion along the bubble surface as a function of particle and bubble ...

Defects in Continuous Cast Steels - IspatGuru

Continuous casting is the central process phase with strong influence on the final quality of the steel products. Several different models for continuous casting have been developed at the Laboratory of Metallurgy at Helsinki University of Technology

The formation mechanisms and characterization (distribution, size and morphology) of the inclusions during continuous casting process of steels were investigated in this study. Samples were taken out from several steps of the process and then, fully characterized via metallographic techniques, microscopic investigations and elemental analysis.

Evolution of Different Inclusions during Ladle Treatment ...

Defects in Continuous Cast Steels. Continuous casting (CC) is the process which converts liquid steel into a solid product mainly in the form of slab (either thick or thin), bloom or billets. It is one of progressive steel making technologies which produces a cast product of a desired cross section in indefinite length.

Determination of non-metallic inclusions in a continuous casting slab of ultra-low carbon interstitial free steel by applying of metallographic method, electrolytic method and RTO technique. Jing ...

Determination of non-metallic inclusions in a continuous ...

Continuous casting A longitudinal facial crack is a specialized type of defect that only occurs in continuous casting processes. This defect is caused by uneven cooling, both primary cooling and secondary cooling, and includes molten steel qualities, such as the chemical composition being out of specification, cleanliness of the material, and homogeneity.

Inclusion Removal by Bubble Flotation in a Continuous ...

Continuous Casting Quality control in manufacturing process / Control of nonmetallic inclusions and segregation A combined electromagnetic stirring system in the mold and terminal stage of solidification is used in continuous casting to reduce inclusions and improve center segregation.

The current paper studied the entrapment of inclusions in continuous casting billets by observation of industrial steel samples and mathematical modeling. The following conclusions are derived:

Continuous / Ingot Casting | KOBE STEEL, LTD.

In this paper, two types of defects on the hot rolling plate, defined as type A and type B respectively, have been analyzed on the continuous casting of titanium-stabilized stainless steel (1Cr18Ni9Ti or 06Cr18Ni10Ti). The experimental results showed that the two types of defects were corresponded to slag entrapment and precipitation of TiN during solidification, respectively. When the liquid mould ...

inclusions by bubbles in molten steel and applies them to the continuous casting mold for typical conditions. The problem of modeling the multiple size and time scales involved in inclusion removal by bubbles is handled by sep-arating the phenomena into models at two different scales. A small-scale model is used to quantify the attachment prob-

Inclusions In Continuous Casting Of Steel

Continuous casting, also called strand casting, is the process whereby molten metal is solidified into a "semifinished" billet, bloom, or slab for subsequent rolling in the finishing mills. Prior to the introduction of continuous casting in the 1950s, steel was poured into stationary molds to form ingots. Since then, "continuous casting" has evolved to achieve improved yield, quality ...

12) The rest of this report is an extensive review on inclusions in steel continuous casting, their sources, morphology, formation mechanisms, detection methods, and the effect of various continuous casting operations. 2. Inclusions in Steel Non-metallic inclusions in steel are termed as indigenous inclusions and exogenous inclusions

Study on Inclusions of Titanium-Stabilized Stainless Steel ...

Minimizing inclusions in the mould is one of the most important quality issues of continuous casting. Inclusions deteriorate the mechanical properties of steel under tension, bending, hole expanding, press forming, and other types of working, and cause surface defects.

INCLUSIONS IN CONTINUOUS CASTING OF STEEL

The presence of inclusions significantly hampers the quality of cast product. In continuous casting process, mold is the last resort for inclusion-removal by floatation to the top slag layer which ...
