Information Theory and Coding - Gopalan Colleges

Information theory is the study of achievable bounds for communication and is largelyprobabilistic and analytic in nature. Coding theory then attempts to realize the promise of thesebounds by models which are constructed through mainly algebraic means. Different conceptshave been explained with the help of examples.

information theory are: how can 'information' measured? How can 'infor-mation' be transmitted? From a communication theory perspective it is reasonable to assume that the information is carried out either by signals or by symbols. Shannon's sampling theory tells us that if the channel is bandlimited, in place of the

Information Theory And Coding By

Information theory is a broad and deep mathematical theory, with equally broad and deep applications, amongst which is the vital field of coding theory. Coding theory is concerned with finding explicit methods, called codes , for increasing the efficiency and reducing the error rate of data communication over noisy channels to near the channel capacity .
