HPLC, differences between sample volume and Injection volume?

We conclude that injection volumes higher than 3.5 mL are worth exploring if required for the development of efficacious drug treatments. Studying tissue back pressure, injection site leakage, local tolerability, and injection-related adverse events, such as injection pain, should be considered for the development of higher SC injection volumes.

Subcutaneous Injection Volume of Biopharmaceuticals ...

The maximum injection volume or swept volume is the product of the screw diameter and its maximum retraction stroke during plasticating. The value is expressed in cubic centimeters (cm³), cubic inches (in³), and sometimes as the weight in ounces (oz) or grams (gm) of plastic material that can be injected (Table 10.4).
