Taphonomy is the study of how organisms decay and become fossilized or preserved in the archaeological record. The term taphonomy (from Greek *táphos*, ?????? 'burial' and *nomos*, ?????? 'law') was introduced to paleontology in 1940 by Soviet scientist Ivan Efremov to describe the study of the transition of remains, parts, or products of organisms from the biosphere to the lithosphere.

Consequently, many authors assert that post-separation contact is a potentially abusive experience for children who are exposed to the physical, psychological and sexual abuse of their mother during contact visits (Radford et al., 1999, Mullender et al., 2002; Saunders & Barron, 2003; Smith-Stover, Van Horn, Turner, Cooper, & Lieberman, 2003 ...

The impact of exposure to domestic violence on children ...

Cleary and Luxenburg (1993), in a study of more than 60 serial murderers, found that psychological and/or physical abuse was a pervasive characteristic of serial killers' childhoods consistent with numerous other studies and case reports (De Becker, 1997, Inguito et al., 2000, LaBrode, 2007, Mitchell and Aamodt, 2005, Mouzos and West, 2007 ...

Neurodevelopmental and psychosocial risk factors in serial ...

Obesity is now recognized as a chronic or non-communicable disease. Recent research has clarified the physiology of weight regulation, the pathophysiology that leads to unwanted weight gain and maintenance of the obese state even when reasonable attempts in lifestyle improvement are made, and the adverse health consequences of generalized and central obesity.

Definitions, Classification, and Epidemiology of Obesity ...
