RADAR- Basics, Types & Applications. RADAR stands for Radio Detection and Ranging System. It is basically an electromagnetic system used to detect the location and distance of an object from the point where the RADAR is placed. It works by radiating energy into space and monitoring the echo or reflected signal from the objects. It operates in the UHF and microwave range.

Shelves: signals-communication. A good read and still pretty applicable. There are more modern texts in the field, but few surpass its impact in the field. I would further recommend Principles of Modern Radar by Mark Richards or Modern Radar System Analysis by David K Barton as a more current and applicable text in the field.
