Again, first law of thermodynamics it tells us, it's not just being created out of thin air, it must be converted or being transferred from some place. Well, I just gave you a hint, this thermal energy is due to the electrons moving through the filament. They're moving through the filament which has some resistance, and that generates heat.

Introduction to Thermodynamics - CliffsNotes

Chapter 1: Introduction and Definition of Terms ‡ History Thermodynamics began with the study of heat and work effects and relations between heat and work. Some early thermodynamics problems were for very practical problems. For example, in a steam engine heat is supplied to water to create steam. The steam is then used to turn an engine which does work.
