Thermodynamics - Wikipedia

Prof. Jin-Yi Yu The First Law of Thermodynamics • This law states that (1) heat is a form of energy that (2) its conversion into other forms of energy is such that total energy is conserved. The change in the internal energy of a system is equal to the heat added to the system minus work done by the system: $U = Q - W$

Thermodynamics is a branch of physics that deals with heat, work, and temperature, and their
relation to energy, radiation, and physical properties of matter. The behavior of these quantities
governed by the four laws of thermodynamics which convey a quantitative description using
measurable macroscopic physical quantities, but may be explained in terms of microscopic
constituents by ...
