Infrastructure security -
Wikipedia

iWeb's servers are provided unmanaged, with the exception of managed hosting offers (where some parts of the IT infrastructure security are included in the package). As such, securing servers is considered the client's responsibility. To help you secure your server(s), here are some tips, recommendations and best practices to follow to increase the security of your assets and IT architecture.

Security and Resilience

Month | CISA

Ensuring your IT infrastructure is protected from cyberattacks is critical for businesses today. Last week, we discussed the importance of safeguarding your infrastructure from the ever-evolving threat of cybercriminals and detailed the first step in the process: Performing a security audit.. Once you have finished your security audit and established benchmarks, identified vulnerabilities, and ...
