TypeScript: Handbook - Triple-Slash Directives
Note that using export default in your .d.ts files requires esModuleInterop: true to work. If you can't have esModuleInterop: true in your project, such as when you're submitting a PR to Definitely Typed, you'll have to use the export= syntax instead. This older syntax is harder to use but works everywhere. Here's how the above example would have to be written using export=:

Working with JavaScript in Visual Studio Code
The header works in the same way as the triple-slash reference mentioned above, it just means that the content of the JavaScript file itself does not need to be modified, and the location of the type definitions can be determined by the server itself.

How do I reference a field through javascript? (JavaScript)

File objects are generally retrieved from a FileList object returned as a result of a user selecting files using the <input> Page 6/25

D3.js - Data-Driven Documents
The FormData object lets you compile a set of key/value pairs to send using XMLHttpRequest. It is primarily intended for use in sending form data, but can be used independently from forms in order to transmit keyed data. The transmitted data is in the same format that the form's submit() method would use to send the data if the form's encoding type were set to multipart/form-data.
