SQL information and training continues to grow with the need for a database behind every website capable of offering web-based information queries. SQL is the de facto standard for database retrieval, and if you need to access, update, or utilize data in a modern database management system, you will need SQL to do it.

Joe Celko's Trees and Hierarchies in SQL for Smarties

Celko does his best to make the entire subject of trees and hierarchies understandable. He's good at coming up with real-world examples so you can follow the abstract concept - a newsgroup and its message threads make up a frequent insertion tree, nested sets are like 'counting tags' in XML or HTML, and so on.
