Journal of Fractional Calculus and Applications
Fractional calculus is a branch of mathematical analysis that studies the several different possibilities of defining real number powers or complex number powers of the differentiation operator $D = ()$, and of the integration operator $J = ()$, and developing a calculus for such operators generalizing the classical one.. In this context, the term powers refers to iterative application of a ...

The fractional calculus (FC) may be considered an old and yet novel topic. It is an old topic because, starting from some speculations of G.W. Leibniz (1695, 1697) and L. Euler (1730), it has been developed progressively up to now. However, it may be considered a novel topic as well.. Only since the Seventies, the FC has been the object of specialized conferences and treatises.
