Kaluza-Klein Theory The original Kaluza-Klein theory was one of the first attempts to create an unified field theory i.e. the theory, which

would unify all the forces under one fundamental law. It was published in 1921 by German mathematician and physicist Theodor Kaluza and extended in 1926 by Oskar Klein. KALUZA-KLEIN THEORY - University of Ljubljana

In physics, Kaluza–Klein theory (KK theory) is a classical unified field theory of gravitation and electromagnetism built around the idea of a fifth dimension beyond the usual four of space and time and considered an important precursor to string theory. Gunnar Nordström had an earlier, similar idea. But in that case, a fifth component was added to the electromagnetic vector potential ...

Kaluza Klein Theories - vasilikideheus.uno
From Weyl's version of metric tensors to Kaluza's Fifth Dimension to Eddington's Affine connection, there were many attempting to build a Unified Theory. General relativity equations use a mathematical structure called metric tensors, which Hermann Weyl tried to incorporate in his Unified Field Theory.

Kaluza–Klein theory - Wikipedia
The unification attempt by Hermann Weyl (1885–1955) in 1918, finally, was to apply a gauge transformation within a four-dimensional space with a generalized non-Riemannian metric [10]. Although Nordström was the first to introduce a five-dimensional space, it was Kaluza's theory from 1919 that proposed a realistic unification of the two interactions.

This point of view, called the Kaluza-Klein theory (Theodor Kaluza made the first steps

after Weyl) is now generally accepted. Moreover, it is just the first stage in the enlargement of ordinary space-time. To include the other nuclear forces we need even more dimensions and current research centres on a total space-time dimension of 10 or 11.

The Weyl-style papers and the Kaluza-inspired papers (papers on the Kaluza-Klein theory, as we call this direction today). Weyl was trying to add the $U(1)$ gauge symmetry among the local symmetry principles of GR (add it to the diffeomorphisms) just like in the "segregated" treatment of gravity and electromagnetism.
