Seven is the number of completion, and the completion was the final death of their well-meaning intentions to do for God. Until that dies, there is no true priestly service, and if it is not priestly, then it is not apostolic. Jesus is the High Priest and Apostle of our confession. The first must precede the last.

Foundations of Measurement Series by David H. Krantz

In detail below we describe the proper way to measure foundation movement. Measuring foundation wall tip, lean, or bulge: is simple: drop a plumb line near the most-bulged area (usually the center) of the wall, perhaps fastening it to a nail in a floor joist overhead, about 4" in from the wall. Measure from the string in to the wall at various heights up the wall.

Bernard Katz, quantal transmitter release and the foundations of presynaptic physiology. The papers by Fatt & Katz (1952) and del Castillo & Katz (1954) were watershed events in the history of synaptic physiology because they established that neurotransmitters are released from presynaptic terminals in discrete 'quanta'.

del Castillo & Katz (1954) were able to substantiate this observation rigorously by analysing some of the EPP recordings published in the Fatt & Katz (1952) paper. They found that the statistical fluctuations in EPP amplitude were precisely as predicted from a Poisson series, with maxima in the distribution of EPP amplitudes occurring at multiples of the mean amplitude of minis (Fig. 2 B).

It was introduced by Leo Katz in 1953 and is used to measure the relative degree of influence of an actor (or node) within a social network. Unlike typical centrality measures which consider only the shortest path (the geodesic) between a pair of actors, Katz centrality measures influence by taking into account the total number of walks between a pair of actors.
