Limitations to this pilot do not allow for specific comment on or validation of the efficacy of the King LT® as a first or second line airway tool. No digital end-tidal CO₂ monitoring was available; nearly all of the patients were critically ill or near dead and no patient follow-up was available for the few who survived to the ED.

Laryngeal tube - Wikipedia

In the first 9 months there was no improvement in the overall survival or proportion of patients with CPC 1 or 2 with use of the KA and ITD. The KA was removed from the BLS protocol and used by paramedics only if unable to ventilate and unable to insert an endotracheal tube. The King Airway is a Class IIa device in the 2010 AHA Guidelines (2):

To Tube or Not to Tube? - American Heart Association | To ...

The King Airway is the subject of two recalls. One recall is for a manufacturing problem that resulted in the King LTS-D being too flexible and possibly folding over on itself in the airway. [1] I suspect that this could be handled by a modification of technique, but I have not had an opportunity to play with any of these faulty King Airways.. The other recall is for including Triad ...

KING AIRWAY FOR BLS FIRST RESPONDER Rural and Remote Areas

In this analysis of OOHCA airway management, first attempt BLS King LT-D placement success exceeded that of first attempt paramedic ETI success. In addition, patients in the King LT-D group were more likely to have had an advanced airway attempted and to have had a successful advanced airway placed when multiple attempts were required.
