In the metric system, weight is measured as Newtons. Newtons is a measure of FORCE. It refers to the force exerted on an object with mass by the gravitational pull it is exposed to.

Metric Measurement Lab - BIOLOGY JUNCTION
The metric system is an internationally recognised decimalised system of measurement. It is in widespread use, and where it is adopted, it is the only or most common system of weights and measures. Its current form is known as the International System of Units (SI). It is used to measure everyday things such as the mass of a sack of flour, the height of a person, the speed of a car, and the

Lab 2 The Metric System and Measurement Flashcards | Quizlet
The metric system is the measurement system used by scientists and used in everyday life in almost every other country in the world except in the United States. Most of the measurements in the United States use the English system of pounds, inches, and ounces. England abandoned the old fashion method long ago.
