## 1. Introduction.

Detection and removal of landmines is a serious problem affecting civilians and soldiers worldwide. It is estimated that there are up to 100 million active buried million landmines in the world and that

The process can be safely sped up by use of Ground-

Penetrating Radar (GPR) to image the subsurface, to verify metal detection results and safely ignore any objects which could not possibly be a landmine. In this thesis, we explore the possibility of using

multiple landmine. 1.  
Introduction Safe  
landmine removal is  
an urgent but difficult  
job faced by many  
countries. The  
removal process  
requires detection of  
a landmine buried in  
the ground. Once it is  
detected, the  
landmine can be  
eliminated in various  
ways.
