Some researchers have established clinical criteria to identify those patients who are most likely to have abnormal scans. For example, in a group of 909 consecutive patients who had experienced a mild head injury with a transient loss of consciousness, yet scored a full 15 on their initial GCS, all 57 (6%) patients with abnormal CT scans were identified by the presence of any one of the ...

L-Arginine: MedlinePlus Supplements

Blood donations are divided into groups based on who will receive the collected blood. An 'allogeneic' (also called 'homologous') donation is when a donor gives blood for storage at a blood bank for transfusion to an unknown recipient. A 'directed' donation is when a person, often a family member, donates blood for transfusion to a specific individual.

Blood donation - Wikipedia

Blood transfusion is the process of transferring blood or blood products into one's circulation intravenously. Transfusions are used for various medical conditions to replace lost components of the blood. Early transfusions used whole blood, but modern medical practice commonly uses only components of the blood, such as red blood cells, white blood cells, plasma, clotting factors, and platelets.
