A well-known example of drug development paralleling discovery of rational molecular targets is trastuzumab, an anti-human epidermal growth factor receptor (HER)-2 monoclonal antibody. HER-2 is overexpressed in 10%–30% of malignant breast cancers, and overexpression of HER-2 is a strong predictor of response to trastuzumab therapy [ 2 ].

Historical introduction. Claude Bernard was Sir William Paton's great physiological hero. When the Physiological Society celebrated its centenary in 1976, Bill contributed a paper to the historical part of the meeting concerning one of Bernard's experiments on curare and drawing attention to the important role his ideas played in the foundation of the Society in 1876 (Paton, 1976).
