On D. Tymoczko's critique of Mazzola's counterpoint theory

This paper critiques Guernio Mazzola's derivation of traditional counterpoint rules, arguing that those principles are not well-modeled by pitchclass intervals; that Mazzola's differential treatment of fifths and octaves is not supported musically or by traditional counterpoint texts; that Mazzola's specific calculations are not reproducible; that there are a number of intuitive considerations weighing against Mazzola's explanation; that the fit between theory and evidence is not ...

Work initiated by Guerino Mazzola (born 1947) has given counterpoint theory a mathematical foundation. In particular, Mazzola's model gives a structural (and not psychological) foundation of forbidden parallels of fifths and the dissonant fourth.

Marked strong dichotomies are important abstractions for the math-ematical theory of counterpoint as conceived by Mazzola, for they generalize the notion of consonance and dissonance in the...

The counterpoint line. In second species, the increase in notes and the added freedom involving the use of dissonance makes it easier to move by step without causing other musical problems. Thus, a second-species counterpoint is even more dominated by stepwise motion than in first species.

Abstract. We extend Mazzola's counterpoint model in terms of category theory. One immediate outcome is the possibility of relaxing the "yes/no" character of the definitions of consonance, and stressing its dependence on context in general. A counterpoint model with sets instead of pure pitches is obtained.

Biography. Mazzola is well known for his application of sophisticated mathematical concepts such as topos theory to music theory, described in his book The Topos of Music. The result has been somewhat controversial, drawing praise from some mathematicians and music theorists, such as Alexander Grothendieck, Yuri Manin, Yves André,...

Work initiated by Guerino Mazzola (born 1947) has given counterpoint theory a mathematical foundation. In particular, Mazzola's model gives a structural (and not psychological) foundation of forbidden parallels of fifths and the dissonant fourth. Octavio Agustin has extended the model to microtonal contexts.

theory), the t of Mazzola's theory provides some justification of its relevance. Furthermore, Fux's theory is supposed to be a reasonable approximation of the practice of counterpoint, so we would expect a closer observance by Palestrina of Fux's rules than of Mazzola's model. The comparison we had drawn suggests

Our intention in generalizing Mazzola's counterpoint theory via category and topos theory is to relativize the notion of consonance and dissonance, and to be able to apply contrapuntal techniques to other musical objects besides pitch.

Guerino Mazzola. In Vol. I the author explains the theory's conceptual framework of denotators and forms, the classification of local and global musical objects, the mathematical models of harmony and counterpoint, and topologies for rhythm and motives. In Vol. II he explains his theory of musical performance,...

Abstract This paper presents a brief overview of Mazzola's counterpoint theory for the 12-tone equal temperament [G. Mazzola, The Topos of Music, Birkhäuser-Verlag, Basel, 2002]. A similar theory for a 2 k -tone equal temperament is shown to be feasible for k [2], a positive integer.

Theory and the Rules. Counterpoint begins with the cantus firmus or the fixed melody. The counterpoint is then composed against, note for note (point against point), the cantus firmus. In its simplest form, first species counterpoint is a single note against a single note. Each interval, or the distance between two notes,...
