UWB Microstrip Antenna with Inverted Pie Shaped ... - Springer

A very efficient transmission line model for the analysis of arrays of rectangular microstrip antennas is presented. The structure of the model is discussed, and its validity is proved. This is done for the isolated microstrip antenna as well as for the coupling between antennas. Then follows a discussion of the numerical efficiency.

A patch antenna suited for indoor HIPERLAN is presented. The antenna operates in $T M_{02}$ mode and its radiation pattern is omnidirectional in azimuth and has a null in the normal direction. An experimental prototype has been designed and tested. A 6.1% bandwidth of $VSWR \leq 2$ and 4.2 dB antenna gain were measured at 5 GHz band.

Microstrip Patch Antennas: A Designer's Guide - Springer

A method has been devised to analyze multilayer electrically thick circular microstrip antenna excited by a probe. The current on the probe is taken to be uniform. This method was verified by analysis and experiment of an electrically thick circular microstrip antenna with an air gap. Based on the free space electric dyadic Green's function, the field expression of an horizontal electric ...

A design of a circular polarized microstrip stack patch antenna is presented. In this paper, a corner truncation at opposite side of square patch is printed on two FR-4 substrates, one is for stack and another for radiating patch, to achieve circular polarization; the rectangular slot is introduced at the centre in diagonal with axis to increase bandwidth and reduce size.

Microstrip Patch Antennas | springerprofessional.de Volume II covers antenna theory and design, describing a number of antenna types, including receiving, wire and loop, horn, frequency-independent, microstrip, refelector, and lens antennas. This section also includes arrays, providing array theory as well as exploring waveguide-fed slot arrays,

In order to overcome the narrow-bandwidth of the patch antenna, one kind of configuration which can widen the bandwidth significantly is discussed in this letter. Analyzed by the equivalent-circuits method and simulated by HFSS, a rule derived from simulated results that can aid to design the microstrip antennas is found. Finally, the structure parameters are optimized out, which reaches 44.67 ...

This study proposes a new design of dual linearly polarized microstrip (patch) antenna which uses a set of slits and slots to effectively reduce the area of patch compared with the conventional, dual linearly polarized square patch. The proposed antenna was simulated by using EM simulator IE3D. The antenna is designed on inexpensive FR4 substrate.
