Concentration, Solute & Solvent, Molarity | High School Simulation: Preparing Solutions. In this simulation, students will complete a calculation in order to determine either the molarity of solution, volume of solution, or mass of solute needed. Additionally the associated particle diagram for the solution will be displayed to help students better visualize the solution at the particulate level.

Classroom Resources | Solutions | AACT

Discussion The objective of the experiment was to determine the limiting reactant in a mixture of two soluble salts. The two salts that were used were calcium oxalate monohydrate and potassium oxalate monohydrate. Another objective to determine the percent composition of each substance in the salt mixture. To find these objectives, a basic salt mixture was prepared and heated with a hot plate ...

The sample mixture is applied as a small spot near one edge of the TLC plate; this is called "spotting". The plate is then put vertically into a solvent system reservoir such that the spotted edge is placed down (but keeping the spots above the level of the reservoir) and the solvent system will ascend the plate.
