to look in the module directory for templates as well as the theme directory.

Module 2 Study Guide.docx - Module 2 Template Environment ...
Template-driven forms use two-way data binding to update the data model in the component as changes are made in the template and vice versa. You can build forms by writing templates using Angular template syntax and directives with the form-specific directives and techniques described in this tutorial, or you can use a reactive (or model-driven) approach to build forms.
