Natural Polymer - an overview | ScienceDirect Topics
Biopolymers & Biomaterials.
Biopolymers and biomaterials encompass materials from proteins, DNA, and carbohydrates to synthetic or natural materials that have been engineered to interact with biological systems for medical purposes. 15 research groups from the Faculty of Science, the Faculty of Engineering and the Schulich School of Medicine and Dentistry, as well as the Robarts Research Institute engage in these areas of

Natural Polymers, Biopolymers and Biomaterials Part II ...

Polymers from natural sources are particularly useful as biomaterials and in regenerative medicine, given their similarity to the extracellular matrix and other polymers in the human body.

Natural and Synthetic Biomedical Polymers - 1st Edition

Biopolymers are polymers produced by living organisms ; in other words, they are polymeric biomolecules. Biopolymers contain monomeric units that are covalently bonded to form larger structures.

Natural polymers are the materials that we can find in nature while synthetic polymers are the man-made materials. The polymer material that forms inside biological systems is named as biopolymers. Also, according to the process of synthesis, there are two forms of polymers. They are the addition and
