### Australian Moth Families - Butterfly House

Lepidoptera (/ ˌ l ɛ p ɪ d ɒ p t ər ə / LEP-i-DOP-tər-ə, from Ancient Greek *lepís* “scale” + *pterón* “wing”) is an order of insects that includes butterflies and moths (both are called lepidopterans). About 180,000 species of the Lepidoptera are described, in 126 families and 46 superfamilies, 10 percent of the total described species of living organisms.

### Lepidoptera - Wikipedia

The Bombycidae are a family of moths. The best-known species is *Bombyx mori* or silkworm, native to northern China and domesticated for millennia. Another well-known species is *Bombyx mandarina*, also native to Asia.. Taxonomy. The family was recently severely restricted, and currently contains only one or two subfamilies, the Bombycinae and Epiinae (previously the tribe Epiini).

### Bombycidae - Wikipedia

I lepidotteri (Lepidoptera Linnaeus, 1758) sono un vasto ordine di insetti olometaboli a cui appartengono oltre 158 000 specie, note come farfalle e falene. Il nome fa riferimento alle piccole squame ovali che ricoprono le ali di questi insetti, disposte le une sulle altre, come gli embrici di un tetto, ma che all'occhio naturale sembrano un semplice pulviscolo; deriva dal greco antico ...
