Eye anatomy and physiology - how the eye and vision work
Anatomy and Physiology of the Eye
Eyelids are the flexible and mobile multilayer structures that cover the eye anteriorly. When the eyelids are closed, they cover the globe. The primary function of the lids is to protect the eye from bright lights and foreign objects. The blinking action also serves to protect the cornea from drying. The tear film is

The Eye - Science Quiz

The resulting eye is a mixture of a simple eye within a compound eye. Another version is a compound eye often referred to as "pseudofaceted", as seen in *Scutigera*. This type of eye consists of a cluster of numerous ommatidia on each side of the head, organised in a way that resembles a true compound eye.
