Our vaccination dataset uses the most recent official numbers from governments and health ministries worldwide. The population estimates we use to calculate per-capita metrics are all based on the last revision of the United Nations World Population Prospects. A full list of our country-specific sources is available at the bottom of this page, and we also answer frequently-asked questions there.

Psychotherapeutic benefits of compassion-focused therapy ...
Near-sightedness, also known as short-sightedness and myopia, is an eye disorder where light focuses in front of, instead of on, the retina. This causes distant objects to be blurry while close objects appear normal. Other symptoms may include headaches and eye strain. Severe near-sightedness is associated with an increased risk of retinal detachment, cataracts, and glaucoma.

Adjusted ESs should be reported along with the pre- and post-ES so as not to confuse readers. Calculating an adjusted ES can have a major impact on the final result. Suppose the hypothetical pre- and post-ESs in Figure 1a are 0 and 0.20; in Figure 1b, they are 70.20 and +0.20 and in Figure 1c they are 70.20 and +0.20, respectively.
