This is an introduction to basic tools of linear PDE. The course will focus on the classical PDEs of mathematical physics: the wave equation, the diffusion/heat equation and Laplace's equation. We will emphasize both the computation and theory: the students will be solving PDE, but also proving and exploring properties of the solutions.

A solution of a PDE is a function $u(x, y, \dots)$ that satisfies the equation identically, at least in some region of the x, y, \dots variables. When solving an ordinary differential equation (ODE), one sometimes reverses the roles of the independent and the dependent variables—for in-
