Peppered Moth Again | Answers in Genesis

Most of the peppered moths in the area were light colored with dark spots. As the industrial revolution progressed, the tree trunks became covered with soot and turned dark. Over a period of 45 years, the dark variety of the peppered moth became more common (CCC - Cause and Effect).

Peppered Moth – An Activity in Natural Selection

So if there are 9 light-coloured moths, they would make 9 more moths and if there are 14 darker moths remaining, they will make 14 more dark moths. This is a more accurate representation of the amount of moths that will be created after each generation as oppose to assuming there would be a switch in colour after each moth type is consumed.

Pepper Moths Worksheets - Lesson Worksheets

Like many moths in forests, the peppered moth tends to rest (or "perch") on tree trunks during the day. They do most of their flying at night. So it would probably be a good thing if the moths look similar to the trees that they perch on, right? Then they can be camouflaged from birds that want to eat them. Before the Industrial Revolution, the light peppered moth was common, while the dark form was very rare.

Peppered Moths | Natural Selection Game

The peppered moth—widely hailed as "a compelling example of evolution in action"—is back in the news thanks to the posthumous publication of "the last experiment of Michael Majerus."? Majerus, an evolutionary biologist, in 1998 wrote Melanism: Evolution in Action, a book in which he suggested "the peppered moth case is fatally flawed as an example of Darwinian evolution."

Natural Selection Worksheet - Denton ISD

Like most moths, peppered moths avoid predators that hunt in the daylight by flying at night and resting during the day. Any animal sitting still is harder to see than a moving one. Peppered moths have extra camouflage to help hide them. The trees they live in have light colored bark and are covered with small fungi called lichens. The pattern on peppered moths wings look very similar to lichens.
