Periodic Law. Elements in same group has the same number of valence shell electrons which the amount is the same as the group number. e.g. Group II has elements with valency of 2 electrons. The charges relates to the group number and number of valence electrons. Elements on left side periodic table lose ions to form cation.

The periodic table has its specific shape to indicate the electron sub-shells and the block which a given element falls into. This is based on experimental data; the energy cost of removing the first outer shell electron (the ionization energy) from a sample of a given element follows a consistent pattern across the period (see lesson Periodic Trends: Ionization energy).

PERIODICITY OF ELEMENTS - Fun Science

The horizontal rows present in the periodic table are called periods. The vertical columns present in it are called groups. There were total eight groups in Mendeleev's periodic table, I to VIII. Properties of elements in a particular period show regular gradation (i.e. increase or decrease) from left to right.
