Alex Garrett - Leanpub

This program is extremely simple and you really did not need to use PHP to create a page like this. All it does is display: Hello World using the PHP echo statement. Note that the file does not need to be executable or special in any way. The server finds out that this file needs to be interpreted by PHP because you used the ".php" extension, which the server is configured to pass on to PHP.

PHP: The Right Way

J. Alex Sherrer has been in the information technology field for more than 20 years as a manager, portfolio and project manager, business analyst, software developer, technical writer and trainer. He's passionate about reading, learning, and writing and he enjoys discussing innovation, continuous improvement, organisational theories and technology topics with others.

Project Management Software | Microsoft Project

Each release branch of PHP is fully supported for two years from its initial stable release. During this period, bugs and security issues that have been reported are

fixed and are released in regular point releases. After this two year period of active support, each branch is then supported for an additional year for critical security issues only.

Alex Wood joins Clayton Kershaw as Dodgers pitchers on IL ...

For many PHP programmers, object-oriented programming is a frightening concept, full of complicated syntax and other roadblocks. As detailed in my book, *Pro PHP and jQuery*, you'll learn the concepts behind object-oriented programming (OOP), a style of coding in which related actions are grouped into classes to aid in creating more-compact, effective code.

The T-shirt is a project by students from the University of Houston's C.T. Bauer College of Business's Program for Excellence in Selling. As part of a 3M-sponsored summer internship program, students from the Program for Excellence in Selling were tasked with developing a sellable item to help local nonprofits.

### Learn PHP | Codecademy

PHPMailer offers many functionalities over the PHP core function mail(), including SMTP SSL encryption and authentication, HTML messages, file attachments and more.. On top of that, PHPMailer is much easier to use than mail() and provides a clean, readable object-oriented syntax. Let's see in more detail why you should use PHPMailer instead of mail() or other third-party libraries.
