Important Notes A Paradigm lab is a guided inquiry lab that introduces a topic and/or relationship.The paradigm is a useful example that students can think of when recalling how the objects in this topic of physics behave.A practicum is a real-world challenge, where students collaborate to solve a physics problem by investigating an apparatus.

Conservation of Momentum: The linear momentum (which we will simply refer to as momentum below), P , of a mass m moving with velocity v is defined as $P = mv$. For a system consisting of multiple masses, the total momentum of the system is the vector sum $P = P_1 + P_2 + P_3 + \dots$, where $P_1, P_2, P_3 \dots$ are the momentum of individual masses.

For part C we found the mass of the meter stick experimentally by using torques. We removed all masses and clamps except for the knife edge clamp. We then placed a 0.200kg mass at the 0.100meter mark. We found the new center of mass of the stick by moving the knife edge clamp toward the added mass until balance was achieved.

c. Calculate the x- and y-components of the force at 110 in Part 1(a) for a x-y coordinate system with the positive x-axis at 70 . At what angle on the force table is the y-axis now? Replace the original force at 110 by these new x- and y-components on the force table while leaving the balancing force unchanged. Do the components of a vector depend
