### Project A C

Generator, is a solid state device that converts heat flux (temperature differences) directly into electrical energy through a phenomenon called the Seebeck effect (a form of thermoelectric effect). Thermoelectric generators function like heat engines, but are less bulky and

The Sun is the star at the center of the Solar System. It is a nearly perfect sphere of hot plasma, heated to incandescence by nuclear fusion reactions in its core, radiating the energy mainly as visible light and infrared radiation.

Thermoelectric  
Generator - Wikipedia

Introduction  
An electric generator rotates a coil in a magnetic field, inducing an EMF given as a function of time by  $\mathcal{E} = NAB\omega \sin \omega t$ . Generators supply almost all of the power for the electric power grids which provide most of the world's electric
