Continental Drift

Theory definition.

Alfred Wegener was
a German scientist.

About 100 years
ago, in 1915,

Wegener proposed
his theory of

continental drift. In
it, Wegener said that
the continents were
not fixed in place.

He said that all the

Continental Drift.

Today, most people know that

landmasses on Earth move around, but people haven't always believed this.

It wasn't until the early 20th century that German

scientist Alfred Wegener put forth the idea that the Earth's continents

Today, the theory of continental drift has been replaced by the science of plate tectonics. The theory of continental drift is most associated with the scientist Alfred Wegener . In the early 20th century, Wegener published
