Nets Of A Solid. An area of study closely related to solid geometry is nets of a solid. Imagine making cuts along some edges of a solid and opening it up to form a plane figure. The plane figure is called the net of the solid. The following figures show the two possible nets for the cube.

The study of geometry can be broken into two broad types: plane geometry, which deals with only two dimensions, and solid geometry which allows all three. The world around us is obviously three-dimensional, having width, depth and height, Solid geometry deals with objects in that space such as cubes and spheres.

Plane Geometry - MATH

Geometry is derived from two Greek words, geo + metron, meaning earth & measurement. Thus it is concerned with the properties and relations of points, lines, surfaces, solids, and higher dimensional analogues. We study geometry to find the Length, Area, Volume of different Plane and Solid figures which are present around us in this world and to know better about them.
