Genetics is a branch of biology concerned with the study of genes, genetic variation, and heredity in organisms.. Though heredity had been observed for millennia, Gregor Mendel, Moravian scientist and Augustinian friar working in the 19th century in Brno, was the first to study genetics scientifically. Mendel studied "trait inheritance", patterns in the way traits are handed down from parents ...

Molecular biology. A study into the molecular basis of living systems, molecular biology aims to understand, at the most basic level possible, the nature and interactions of the units that make up living organisms. A popular branch of molecular biology involves the study of DNA, with the goal of sequencing or mutating it in order to study the effects and possibilities of these processes.
