Probability: Theory and Examples Rick Durrett Version 5 ... Operating under the philosophy that the best way to learn probability is to see it in action, the book contains extended examples that apply the theory to concrete applications. This fifth edition contains a new chapter on multidimensional Brownian motion and its relationship to partial differential equations (PDEs), an advanced topic that is finding new applications.

Solution. Probability of choosing 1 chocobar = $4/8 = 1/2$. After taking out 1 chocobar, the total number is 7. Probability of choosing 2nd chocobar = $3/7$. Probability of choosing 1 icecream out of a total of 6 = $4/6 = 2/3$. So the final probability of choosing 2 chocobars and 1 icecream = $1/2 * 3/7 * 2/3 = 1/7$. Probability Example 3

book indicates that as we develop the theory, we will focus our attention on examples. Hoping that the book would be a useful reference for people who apply probability in their work, we have tried to emphasize the results that are important for applications, and illustrated their use with roughly 200 examples. Probability is not a spectator

Solutions of Problems on Probability theory Chapter 1 P.1.1 Rolling three dices, evaluate the probability of having k equal faces, with $k \in \{0, 2, 3\}$. Solution. $P(0) = \frac{6^3 - 6 \cdot 5^3}{6^3} = 0,5$ $P(2) = \frac{6 \cdot 5^3}{6^3} = 0,416$ $P(3) = \frac{6}{6^3} = 0,027$ P.1.2 Rolling a dice three times, evaluate the probability of having at least one 6. Solution. $p = 1 - \frac{5^3}{6^3} = 0,42129..$
