Bash, like other shells, is just a tool for coordinating other commands. Typically you would try to use standard UNIX commands, but you can of course use Bash to invoke anything, including your own compiled programs, other shell scripts, Python and Perl scripts etc. In this case, there are a couple of ways to do it.

C++ - Wikipedia

Object-oriented programming System (OOPs) is a programming paradigm based on the concept of "objects" that contain data and methods. docx: Homework: Create a dabase. It's appropriate for introductory academic and professional course sequences based on the curriculum recommendations of the ACM and the IEEE professional societies,1 and for ...
