Quantum Transport Theory. (eBook, 2004) [WorldCat.org]

Quantum transport theory (QTT) (Kohn and Luttinger, 1957, 1958; Kubo, 1957; Dresden, 1961; Chester, 1963; Kubo, 1966; Luttinger, 1968) enjoys no such status: it is neither conceptually nor mathematically simple; it is very hard to make it work; and it often reduces, after considerable labour, to the Boltzmann picture (Peierls, 1974; Cohen and Thirrig, 1973).

The nervous system is a non-linear dynamical complex system with many feedback loops. A conventional wisdom is that in the brain the quantum fluctuations are self-averaging and thus functionally negligible. However, this intuition might be misleading in the case of non-linear complex systems. Because of an extreme sensitivity to initial conditions, in complex systems the microscopic ...
